Dear Valued Customer,

Crosstex products, including Biological Indicators, Spore Suspensions, Quality Control Growth Promotion Suspensions and Chemical Process Indicators are manufactured using non-pathogenic organisms or materials which are not toxic or hazardous in nature. These products do not pose harm to the user's safety and meet OSHA's definition of an article; therefore a SDS is not required per 29 CFR 1910.1200.

In ordinary use of our biological products, the spores or cells would not be directly contacted; this, however, is in order to protect the integrity of the product rather than as a user safety precaution. Actual contact with the spores or cells due to damaged packaging or incident would not be harmful to the user's safety. Direct contact with our non-biological products such as the Chemical Process Indicators (CPI-X0Y codes) and custom indicating labels pose no harm to the user's safety.

In summary, Biological Indicators, Spore and Quality Control Growth Promotion Suspensions, and Chemical Process Indicators manufactured by Crosstex present no health hazard and do not fit into any other class of physical hazard for which a SDS would be required. Use of a SDS format to convey this information could obscure the essentially harmless nature of these products. Crosstex has provided this letter for use in place of a SDS form.

Should you have any questions or concerns, you may contact Crosstex Customer Service using the contact information detailed below:

Telephone: 585.359.0130

Email: orders@spsmedical.com

Thank you,
